Title Of Invention

Name of inventor: Barbara J. Stinnette, United States Citizen
Residence: 806 Hopewood Road
Baltimore, Maryland 21208

Title of invention: DispoTops, plastic disposable trashcan top

The use of the invention is to be able to replace a lost or damaged trashcan top. A good and usable trashcan can be fully used and not have to be replaced simply because the original top is lost. DispoTops can be used to cover the surfaces and tops of many different items of many different shapes and sizes as a means of protection.

Backgroud of the Invention:

Trashcans come with removal lids or tops. During times of inclemate weather, high winds, hurricans and storms, the tops of trashcans could lost. Also even on regular trash pickup days, the workers are not too good about replacing the lids after they dump the trash. The tops get thrown into other yards or even left in the street away from where they originated from where they can be run over by cars.

Most consumers would not immediately replace a trashcan just because the lid has been lost. Not having a trashcan top causes a lot of problems. In windy and stormy weather, trash is blown all over the streets, no lids in hot weather also causes insect infestations, bacterial growth, pungent odors which lures hungry animals and sometimes dangerous ones, into residential areas. This becomes costly to the consumer even to the point of receiving citations from local government.

Having to buy a new trashcan becomes an unnecessary waste to the consumer to have to replace a good trashcan just because the top is missing. By replacing the missing top with my invention the " DispoTop", no longer would any trashcan have to be without a top. No longer would a consumer or resident have to spend or waste money replacing a whole trashcan just because the original top has been lost. All of the problems resulting from not having a top would be eliminated. Also the " Dispo Top" could be thrown away with the trash. No more dirty tops to have to clean the inside of and never would there have to be another topless trashcan.

There are other ways that the " DispoTop" can be used. Tops of boxes could be covered to protect its contents from the outside elements if the boxes have to be put on the outside. Many times when giving items to different charities they require that they be put in cardboard boxes and be placed by the curb. Often times those pickup dates ironically it rains. The items in the boxes could be protected by using my invention the " DispoTop ". The surfaces of pictures could be protected even while still hanging on the wall, table tops while painting, and a number of different household items could be covered when bombing a house for insects. On the outside certain plants and shrubbery can be covered when needed for specific reasons. DispoTops can even be used to cover laundry baskets to cover clean laundry when coming from the laundrymat.
